Application:

RISH Delta Energy measures important electrical parameters in 3 phase 4 Wire, 1 Phase 3 Wire(Split Phase) and 3 phase 3 Wire Network & replaces the multiple analog panel meters. It measures electrical parameters like AC Voltage, AC Current, Frequency, Active, Reactive, Apparent Power, Import & Export Energy & many more.

Salient Features:

- Fast & Easy Installation on panel with self clicking.
- True RMS measurement.
- MODBUS (Rs485) Communication (optional).
- Pulse/Limit Switch output (optional).
- 3 Line 4 Digits ultra bright LED Display (up to 9999).
- On site Programmable CT/PT Ratios.
- User selectable CT Secondary 1A/5A.
- User selectable PT Secondary from 100 VLL to 500 VLL.
- User selectable 3ph3wire / 3ph4wire/1ph3wire(split Phase) / single phase Network.
- Programmable Energy format & Energy rollover count
- Wide auxiliary Power Supply which can accept any input between 40V – 300V AC/DC or 12V – 48V DC.
- Storage of MIN / MAX values.
- Measurement & Display of RPM, Run hours, On hours, No. of interruption.

True RMS measurement

The instrument measures distorted waveform up to 15th Harmonic.

Energy Measurement (Import & Export):

Active Energy (kWh), Reactive Energy (kVArh), Apparent Energy (VAh). Any of the parameters can be assigned to optional Pulse output.

Programmable Energy format & Energy rollover count:

Customer can assign the format for energy display on MODBUS (RS485) in terms of W, kW or MW. Additional to this, customer can also set a rollover count from 7 to 14 digits depending on the energy format, after which the energy will roll back to zero.

Optional Pulse Output / Limit switch (Relay output):

The instrument can be programmed as Pulse output or Limit switch.

Pulse Output : The optional pulse output is a **potential free**, very fast acting relay contact which can be used to drive an external mechanical counter for energy measurement.

Limit Switch : The instrument will trip the relay if the programmed parameter exceeds the programmed Trip Limits.

Optional MODBUS (RS485) Output:

The optional Modbus output enables the instrument to transmit all the measured parameters over standard MODBUS (Rs485).

Configuration of Instrument via MODBUS :

The instrument setting can be configured locally via front panel keys by entering into the programming mode or remotely via MODBUS (Rs485).

Note: The MODBUS communication parameters can only be set locally via front panel keys in programming mode.

Storage of parameters possible

The instrument stores minimum and maximum values for System Voltage, System Current, Run Hour, ON Hour & number of Interruptions. Every 60 sec stored values are updated.

3 line 4 digits LED display:

Simultaneous display of 3 Parameters.

RPM Measurement: The instrument display Rotation per minutes for generator applications. Number of poles can be set on site depending upon application requirement.

Energy Count Storage:

In case of power failure, the instrument memorizes the last energy count. Every 1 min, the instrument updates the energy counter in the non-volatile memory.

User selectable 3 phase 3Wire or 4Wire or 1 phase 3Wire(Split Phase) or Single phase Network

User can program on site the network connection as either 3 Phase 3 Wire or 4 Wire or 1 phase 3wire(Split phase) or single phase network using front panel keys.

In case of self powered Rish Delta only either 3 Phase 4 wire or single phase network are available.

Onsite selection of Auto scroll / Fixed Screen

User can set the display in auto scrolling mode or fixed screen mode using front panel keys.

Enclosure Protection for dust and water:

Conforms to IP 50 (for front face) & IP 20 (for back) as per IEC60529.
